ANALEMMA

THE ARCHITECT OF LIFE

WATER BOTTLE

WATER BOTTLE

### PRODUCT INFORMATION

Bottle capacity: 710 ml / 24 oz or 530 ml / 18 oz  
Available in white or black.

Materials used:

- Stainless steel bottle
- POM-C bottle cap
- Stainless steel strainer with POM-C closing cap
- Quartz glass tube
- Structured (coherent) water

### INTRODUCTION

The Analemma Water Bottle contains a strainer with an integrated quartz glass tube containing Analemma 'motherwater'. It is designed to remain submerged and in direct contact with water for long periods of time.

Thanks to the use of high-quality materials nothing will dissolve or detach into your drinking water, so the strainer can remain immersed without removal.

### APPLICATION

The Water Bottle provides you with stable coherent water every time you (re)fill it. The structured 'mother water' in the strainer core naturally brings the surrounding water into a coherent state. It is designed to stay submerged for prolonged periods of time.

### HOW TO FILL YOUR WATER BOTTLE

Unscrew the entire top part of the water bottle counterclockwise. Remove the cap so the strainer inside the bottle is visible. Place the water bottle under the tap or another water source and fill it. Replace the cap and tighten it by turning clockwise.

### HOW TO DRINK FROM THE WATER BOTTLE

Unscrew the small nozzle cap on top of the bottle cap. Lift and move it towards the handle until it locks into place. You can now drink through the open nozzle.

### MAINTENANCE

The Analemma Water Bottle is made from stainless steel. Over time, limescale or other deposits may form on the strainer or inside the water bottle due to prolonged exposure to water or other liquids. This depends on the specific chemical composition of the liquids used.

If cleaning is required, use a soft brush. Do not use hot or boiling water, as it may damage the crystal glass inner tube. Remove the strainer from the bottle and carefully clean both separately.

Removing limescale:

- 1) Mix equal parts water and vinegar and spray this inside the bottle and/or on the strainer. Leave it for max. 5 minutes, then clean with a soft brush.
- 2) Or place the strainer in the solution (water with vinegar) for not more than 5 minutes, then brush the strainer clean with a soft brush.

**NOTE:** Vinegar can be used to clean stainless steel, but with some caution. Vinegar effectively removes limescale

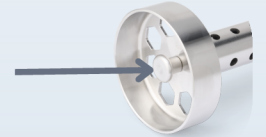

and restores the shine of stainless steel. However, prolonged exposure may damage the stainless steel, so it should not be used too often and only for or for short durations.

In all cases, after cleaning the product, rinse thoroughly with clean water and dry the surface with a soft cloth to prevent new deposits.

Keep the POM-C cap in place to protect the crystal glass core. Do not remove it!

Store the product in a safe place when not in use.

To clean the inside of the strainer, unscrew the pull-out knob on the top counterclockwise. This will let you detach the top part and will give you access to clean the inside if needed with a small, soft bottle brush.

### SAFETY & USAGE ADVICE

The Water Bottle is intended for use with potable water.

Do not use the product with substances or liquids that may damage any of its materials. High acidic liquids may damage stainless steel. Avoid high impact situations, extreme temperature changes, such as freezing or exposure to boiling water, to prevent damage to or even possible shattering of the crystal glass core. Be aware to not let stainless steel come into contact with non-stainless steel surfaces.

Do not use aggressive or chemical cleaning agents on this product. This product is not dishwasher safe.

Keep the inner strainer out of reach of children. The crystal glass core is fragile and may cause injury and/or breakage if dropped or handled incorrectly. Treat your Water Bottle kindly and check regularly, inside and out, that all components are in top condition.

### CONTACT

We are happy to assist you with any questions regarding use, maintenance or application.
